

These statements represent many of the best practices in supply chain risk management that Dynamic applies in its client solutions. Use these 10 benchmarks to gain an understanding of how well your company is managing supply chain risk.

Supply Chain Risk Self-Diagnostic	YES	NO
1. We rarely source customized components.		
2. Our specifications for non-critical components allow for alternative, technically compliant substitutions.		
3. We are confident that we know the country of origin for all the components we source.		
4. We typically specify components that are available from multiple sources.		
5. Our suppliers proactively inform us of end-of-life dates when components are initially specified.		
6. When selecting a component, we weigh supply chain risk equally or more than component cost.		
7. Our suppliers consistently inform us of any actual or anticipated risks to component supply.		
8. Most of our components are manufactured in the US, or not typically impacted by international events.		
9. We know, at all times, exactly which of the parts we source are most at risk and why.		
10. We are confident that our suppliers are diligently managing the risk in our supply chain.
